

M. Kyuregyan, E. Harutyunyan and M. Evoyan	5
On a class of irreducible polynomials over F_p	
M. Kyuregyan and O. Manukyan	16
Completely normal elements in iterated quadratic extensions of finite fields of odd characteristics	
M. Haroutunian and A. Muradyan	21
Lower bound for E-- capacity of discrete memoryless channel with two-sided state information	
E. Haroutunian and I. Safaryan	40
Copulas of two-dimensional threshold models	
E. Haroutunian and A. Yessayan	49
On optimal hypothesis testing for pair of stochastically coupled objects	
N. Grigoryan	60
On multiple hypotheses LAO testing by informed statistician for arbitrarily varying Markov source and on such source coding reliability function	
L. Navael	73
Application of LDT to many hypotheses optimal testing for Markov chain	
H. Sarukhanyan	79
Fast generalized Haar transforms	
C. Дарбинян и И. Карапетян	93
О длинных контурах в направленных графах, проходящих через данную вершину	
C. Дарбинян и И. Карапетян	100
О контурах в направленных графах проходящих через данную вершину	
H. Arakelyan and R. Kamalian	108
On interval-separable subsets of vertices of a complete graph	
S. Balikyan and R. Kamalian	116
Necessary and sufficient condition for existence of locally-balanced 2-partition of a tree under the extended definition of a neighbourhood of a vertex	
P. Petrosyan	122
Interval total colorings of certain graphs	
A. Ghazaryan	130
On one approach to optimization of recursive function computations	
A. Gevorgyan and A. Gevorgyan	142
New mathematical approach for investigation of statistical properties of random environment of D quantum N-particleless in external field	
G. Минасян	150
Применение математической статистики в моделировании геохимических систем на примере северо-восточного побережья бассейна озера Севан	
C. Алахвердян	158
Квадратурная формула золотого сечения	
H. Григорян	163
О методике построения корпоративных сетей передачи данных на базе технологии MPLS VPN	
D. Petrosyan, D. Gevorgyan and K. Khachatryan	167
The subsystem of informing on critical situations through correspondence in ACM cluster	
E. Pogossian and A. Grigoryan	169
Anomalies dynamic analysis and correction software
