

## INDEX OF AUTHORS

|                                                                                                                                                                                                                                                                                              |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <i>Agafonov M. I., Aslanyan A. M., Barabanov A. P., Bubukin I. T., Gulyan A. G., Ivanov V. P., Martirosian R. M., Malyshev I. A., Stankevitch K. S., Stolyarov S. P.</i> , Results of radioastronomical observations of the lunar occultation of the Crab nebula on January 26, 1983 . . . . | 283 |
| <i>Aharontan F. A., Ambartsumian A. S.</i> On the formation of superhigh energy spectrum of cosmic rays in the nuclei of active galaxies . . . .                                                                                                                                             | 275 |
| <i>Ambartsumian A. S.</i> (see <i>Aharontan F. A.</i> ) . . . . .                                                                                                                                                                                                                            | 275 |
| <i>Andreassian N. K.</i> Spectrophotometry of two emission regions in the irregular galaxies NGC 3448 . . . . .                                                                                                                                                                              | 73  |
| <i>Andreassian R. R.</i> On the relative orientations of radio source axes and parent elliptical galaxies . . . . .                                                                                                                                                                          | 93  |
| <i>Aslanyan A. M.</i> (see <i>Agafonov M. I.</i> ) . . . . .                                                                                                                                                                                                                                 | 283 |
| <i>Arshutkin L. N., Kolesnik I. G.</i> The structure of massive molecular clouds .                                                                                                                                                                                                           | 147 |
| <i>Babadjantants M. K., Belokon' E. T.</i> Properties of the optical variability of 3C345 . . . . .                                                                                                                                                                                          | 217 |
| <i>Barabanov A. P.</i> (see <i>Agafonov M. I.</i> ) . . . . .                                                                                                                                                                                                                                | 283 |
| <i>Baryshev Yu. V., Sokolov V. V.</i> Some astrophysical consequences of dynamical interpretation of gravitation . . . . .                                                                                                                                                                   | 361 |
| <i>Belokon' E. T.</i> (see <i>Babadjantants M. K.</i> ) . . . . .                                                                                                                                                                                                                            | 217 |
| <i>Blisnovatyi-Kogan G. S.</i> Integral characteristics of the binary galaxies with tidal forces . . . . .                                                                                                                                                                                   | 87  |
| <i>Blisnovatyi-Kogan G. S., Setdov Z. F.</i> On the oscillations of the star with the phase transition . . . . .                                                                                                                                                                             | 563 |
| <i>Börngen F.</i> (see <i>Shahbazian R. K.</i> ) . . . . .                                                                                                                                                                                                                                   | 393 |
| <i>Bryukhnevich G. I., Gvavgyanzen L. V., Zak E. I., Lipatov S. V., Melamid A. E., Miller V. A., Rylov V. S., Stepanov B. M., Skosyrskaya T. A., Titkov E. I.</i> Double-camera image converter for 6-meter telescope . .                                                                    | 379 |
| <i>I. T. Bubukin</i> (see <i>Agafonov M. I.</i> ) . . . . .                                                                                                                                                                                                                                  | 283 |
| <i>Burenkov A. N., Petrossian A. R., Sahakian K. A., Khachikian E. Ys.</i> A spectral investigation of galaxy Markarian 111 . . . . .                                                                                                                                                        | 433 |
| <i>Dolginov A.</i> Review . . . . .                                                                                                                                                                                                                                                          | 645 |

|                                                                                                                                                      |     |
|------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <i>Egiklan A. G., Kalloghltan A. T., Nanni D., Trevese D., Vignato A.</i> Two-colour photometry of clusters of galaxies. II A 1213 . . . . .         | 21  |
| <i>Fessenko B. I.</i> Are the cells visible in a deep sample of galaxies? . . . . .                                                                  | 269 |
| <i>Grigorian L. Sh.</i> Models of configurations from incompressible liquid taking into account the role of gravitational vacuum . . . . .           | 367 |
| <i>Gulgan A. G.</i> (see <i>Agafonov M. I.</i> ) . . . . .                                                                                           | 283 |
